

Project brief

Review of Community Based Residential Support

For people with learning disabilities and challenging behaviours in Greenwich

Aims

- 1 To find out whether there is enough community based residential support for people with Learning Disabilities, Complex Needs and Challenging Behaviours in Greenwich and to find out if they are good

This should:

- a Look at the **buildings** used for residential services and how much money it would cost to make these building **fit for purpose**.
- b Look at the **types of residential provision**, the size, staffing, staffing qualifications, accommodation costs, and non-accommodation cost for each residential care unit and total cost of each individual residential care unit - are they right?
- c Look at the number of residential care, nursing care and supported lodgings and floating support placements that Greenwich should have based on its population (by looking at national figures).
- d Find out if Greenwich has enough single rooms for adults aged 18-64 in residential and or nursing care.
- e Find out how **satisfied** service users and carers are using **surveys** already done in Greenwich .
- f Find out if our community based residential services provide **person-centred planning**.
- g Using other statistics, look at how good provision is.

Residential provision

National figures

2 To look at the cost of different types of community based residential support for people with Learning Disabilities, Complex Needs and Challenging Behaviours in Greenwich with **other boroughs** similar to Greenwich.

3 To provide a report what we find, with suggestions on the best way forward. This should look at:

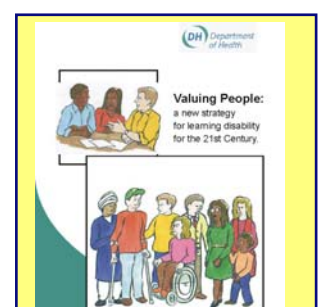

- a Whether the current block commissioned nursing and residential care homes are appropriately **registered** within Greenwich.
- b Could any of the **registered care or nursing homes** become **supported accommodation** rather than registered nursing or residential care homes. Or should **nursing care home** becomes **registered care homes**, and the other way round?
- c Find out the nursing homes and care homes which are not good enough and how much money is needed to **make** them fit for purpose.
- d Suggest **other ways** of providing services.
- e Look at the current costs of providing **residential and nursing care accommodation** to **people with complex needs** in Greenwich compared to that of other boroughs similar to Greenwich

These suggestions should give us an idea of what future community based residential support should look like for people with Learning Disabilities, Complex Needs and Challenging Behaviours in Greenwich over the next ten years.

This should include:

- f Information from **national statistics** on what people with a learning disability might need in Greenwich
- g Provide clear suggestions for the Learning Disabilities commissioning plan in Greenwich based on the **Valuing People Strategy** and the **Draft Greenwich Adults LD Strategy**.

Valuing People

h look at other ways of providing services to **people with complex health needs**.

Do we need a **group of registered specialist nursing staff** to support all community based residential support for people with Learning Disabilities and Challenging Behaviours, **as well as** specialist registered nursing care homes for people with complex health care needs?

There will be 3 months to do the report

Information that will be available through the Health and Social Care Community Learning Disability Team Review Process

Service Users in Block Commissioned and In-House Residential and Nursing Care Homes

- We need **information** on:
Age, gender, ethnicity, residential history - age on entering residential care, total years in current home, number and how many have previously lived in NHS Long Stay Hospitals, types of needs - like challenging behaviour or mental health
- A **statement of need** for each service user - this makes sure there is a **person centred focus** in residential care that looks at things like: rights, independence, choice, inclusion and mainstream housing with adaptations
Find out whether **move on accommodation** is needed for these service users and look at the right sort of accommodation they should move on to.
- A clear statement of their need and what is best for them
- Are service users in the best places for their needs?
Should they be in a **registered nursing care home** or a

person-centred focus

registered social care home or should service users be in **supported accommodation**?

- The **quality of life** of residents (do they have choice, activities, social networks, community involvement and are the views of their family listened to).

choice and activities

Service Users Living with Parents or Carers

- CLDT should look at what is happening and what needs to happen in residential and nursing care
- Service users needing regular **residential nursing care** and or **social care respite provision**

Parents and carers

Information from the Draft Adults Commissioning Plan

- Numbers and Type of Current Council in-house provision and cost (This will include **supported housing, registered care homes** and **adult placement scheme**).
- Numbers, type and costs places the Council pays for but run by other organisations (This will include **supported housing, registered care homes**, and any other type of residential provision)
- Type and cost of places the **Primary Care Trust** pay for (This will include registered nursing residential care and registered care home provision) - **Primary Care Finance Team**
- **Costs** of each residential and nursing care in Greenwich
- **Numbers of places** available from the places paid for and provided in-house LD residential and nursing resources in Greenwich
- Numbers of adults and younger people with a learning disability - who may need residential care in the **future**

Supported housing

Costs of residential care

Monitoring the Project Brief

In Greenwich we have a **Learning Disabilities Joint Commissioning Group** made up of key stakeholders in Greenwich. This group would act as the **steering group** to get updates on the project over the three months.
